

# 100 YEARS OF INNOVATION

## ALUMNI SPOTLIGHT

James P. Horgan '81 is a R&D and technology leader with more than 30 years of experience in the specialty chemical industry. As the former vice president of technology at Sartomer Company, he was responsible for overseeing product and process development, applications and technical service groups.

Jim began his career at Arco Chemical as a process development engineer working on propylene oxide and olefin products. He then switched his focus to poly-bd resins, SMA resins and drag-reducing agents for the rest of his tenure.

In 1986 he joined Sartomer as manager of the company's West Chester, PA pilot plant. After its successful launch he was promoted to manager of process engineering and manager of product and process development, respectively.

While in those positions he was instrumental in the development and commercialization of new specialty chemical products, which led to enormous company growth and solidified more than 20 U.S. and foreign patents for the firm. He also established a process safety management program still currently in use.

In addition to his career accomplishments, Jim is a member of the AIChE and RadTech North America.
