

ALUMNI SPOTLIGHT

Darrel M. Stickler's '80 primary experience is in developing new technology and improving management operations for major energy and technology companies. Currently employed at Cisco Systems in corporate social responsibility, he is in charge of all environmental reporting including company operations, supplier operations, employee actions and product impact.

In beginning his career at General Electric's nuclear energy division, he helped design commercial boiling-water nuclear power plants. He then assumed responsibility for all mechanical, chemical and HVAC systems and equipment design for the advanced boiling water reactor project, and managed an international team of partner design organizations.

After leaving GE in 1995, Darrel joined Applied Materials as a manufacturing engineering manager in the company's physical vapor deposition division. Several years later, he was hired by Apple Inc. to manage the supply base of all audio and power products.

Darrel remained with the tech giant for two years before accepting his current position.
