ExxonMobil Corporation Donates to UD Chemical Engineering Department

The University of Delaware, Department of Chemical Engineering has received a donation of $13,800 from ExxonMobil Corporation. The funds were delivered by CHEG alumni Dr. Tom Degnan (PhD ’77), Dr. Prasanna Joshi (PhD ’98), and Rebekah Cooper (BChE ‘01), who were on campus recruiting for the company. The grant is one of 85 granted to engineering departments throughout the country to support a variety of educational purposes, including scholarships, field trips, visiting speakers, equipment purchases, and student and faculty travel to academic-related activities. The UD Department of Mechanical Engineering also received a grant.

“ExxonMobil has been and continues to be an important corporate sponsor of the Chemical and Mechanical Engineering departments at the University of Delaware,” said Norman Wagner, Stiles Professor and Chairperson. “As importantly, the over 80 CHEG alumni working in ExxonMobil are having a significant impact on our nation’s energy future. We are proud of their achievements and really benefit from their continued support for the Department, College and University.”

The funds from ExxonMobil will provide partial support for the Chemical Engineering Industrial Sponsors Honors Day Awards.
