JOIN a leading team of investigators on projects that will foster your interests, education, and research skills in a stimulating multi-disciplinary scientific and engineering environment focused on the engineering challenges of the 21st century. Help develop innovative solutions for energy independence and environmental sustainability that draw simultaneously from the interface between materials synthesis, characterization, and applications in processes ranging from harvesting solar energy to efficient biomass conversion. Browse our webpage at www.che.udel.edu for updated news and information.

DELAWARE
INTERFACING SUSTAINABLE ENERGY & MATERIALS REU

A University of Delaware Research Experiences for Undergraduates program sponsored by the National Science Foundation and the Department of Defense Air Force Office of Scientific Research

Summer 2016

The application deadline is February 1, 2016
Choose your research topic
Choose projects from over 13 faculty research groups and work as an independent research student alongside PhD students and postdoctoral researchers in Delaware’s Chemical and Biomolecular Engineering, Materials Science, and Biomedical Engineering departments. Core research themes of the REU include solar energy, biomass conversion, thermoelectrics, fuel cells, and bio-inspired materials.

Visit industrial labs
Participants will visit several global research facilities in the Delaware valley during the summer, including Dow, DuPont, ExxonMobil, Air-Liquide, and W. L. Gore global R&D. The R&D projects REU students will see span biomass-generated energy to the development of next-generation fuel cell membranes. Three trips are scheduled each summer.

Develop skills
You will have ample opportunity for professional development, including workshops on research ethics, written and oral communication skills, and grad school prep boot camp, as well as the chance to hear world-class national and international scientists and engineers as part of the Center for Catalytic Science and Technology and Center for Molecular and Engineering Thermodynamics seminar series.

Apply
Application to the program is coordinated through the Department of Chemical and Biomolecular Engineering. The application deadline is February 1, 2016, but earlier applications are encouraged. Location
The University of Delaware has a college-town atmosphere, yet we are centrally located between New York City and Washington, D.C., at the heart of the east coast’s chemical and energy industries.
